TECH TIP:

Tension Clip Placement Test

August 2010

SignComp offers guidelines that show the approximate Tension Clip placement location. With technical advances in face material over the years, there are now a variety of different stretch factors to consider. A simple stretch test can be performed to eliminate any potential tensioning issues.

Cut a 3" strip to the length of your trimmed to size face.

Using our guidelines, attach the Tension Clips to the strip.
(Guidelines listed on page 15 of the 3rd Edition Commercial Catalog)

Tension the strip into your frame. If the face stretches flat use this as your clip placement line.

If the face does not tension properly, reposition the clips closer or further away from the graphics and re-stretch the 3" strip.
