

## Features & Benefits

The 3/4" Wall Frame holds up to 3/16" face material. The Wall Frame has a clear anodized finish allowing for it to be used for interior or exterior applications without painting. The frame accepts a Corner Key to help with alignment. Both vertical pieces are pre-drilled and countersunk for the assembling of the frame. When the panel is slid into the frame the fasteners used to attach the frame to the support structure are hidden.

## Answers to FAQ's

- Face material trim size - Deduct 5/8" from the overall height & width
- When the frame is being used with an existing panel the frame will need to be cut 5/8" larger on the overall height & width
- The Wall Frame is not designed to be used with dividers
